

FERTILITY FORM CANDLE HOLDER, NO. 1

EXCLUSIVE TO NICOLEHOLLIS COLLECTION

RG STUDIO BY ROGAN GREGORY

ORIGIN	PRODUCTION	DESCRIPTION
Los Angeles	Made to Order	This bronze candle holder series references the cycle of life, an iconic motif and theme from Rogan Gregory, reflecting on humanity, impermanence, and perpetual renewal. Gregory leaves each piece unsealed, an invitation for it to take on its own unique character, shifting and changing with the alchemy of light, touch, and time. Available in two sizes—a single-taper size featuring a gentle chromatic patina, and a fully-polished two-taper size.
DIMENSIONS	LEAD TIME	CARE
5"L x 5"W x 10.5"H	8 Weeks	If removing tarnish is desired, use a standard tarnish remover appropriate for brass. Avoid applying to clearly patinated areas. Remove excess with a clean cloth. Superfine 0000 bronze wool or steel wool can be used to regain luster. After removing tarnish, reapply 1-2 coats of paste wax on the affected areas, buffing between coats. Keep in mind that the wax provides limited protection; eventually the bronze will tarnish again and this should be seen as the expected evolution of the material.
FINISH		
Chromatic Patina		
MATERIAL

8 Weeks

DESCRIPTION

This bronze candle holder series references the cycle of life, an iconic motif and theme from Rogan Gregory, reflecting on humanity, impermanence, and perpetual renewal. Gregory leaves each piece unsealed, an invitation for it to take on its own unique character, shifting and changing with the alchemy of light, touch, and time. Available in two sizes—a single-taper size featuring a gentle chromatic patina, and a fully-polished two-taper size.

CARE

If removing tarnish is desired, use a standard tarnish remover appropriate for brass. Avoid applying to clearly patinated areas. Remove excess with a clean cloth. Superfine 0000 bronze wool or steel wool can be used to regain luster. After removing tarnish, reapply 1-2 coats of paste wax on the affected areas, buffing between coats. Keep in mind that the wax provides limited protection; eventually the bronze will tarnish again and this should be seen as the expected evolution of the material.
